SUMMARY

An enthusiastic and curious software developer with a foundation in multimedia design and a deep focus on Artificial Intelligence. Passionate about tackling complex challenges through intuitive UI/UX design and smart automation. Experienced in building robust backend architectures and bridging them with responsive frontend interfaces, while seamlessly integrating advanced AI models, including Machine Learning, Deep Learning, and NLP. A collaborative team player currently expanding full-stack programming skills to engineer impactful, next-generation IoT solutions.

EDUCATION

President University, Cikarang Candidate for Sarjana Komputer (S.Kom.) GPA: 3.86 / 4.00	Aug 2024 - Present
Vocational School, Multimedia SMK Unggul Sakti, Jambi	Jul 2021 - May 2024

WORK EXPERIENCE

V-TECH Computer, Computer Technician Executed complete hardware and software provisioning for new system purchases, streamlining OS installations and driver configurations to ensure optimal device performance.	Jun 2023 - Aug 2023
JD Production, Photographer - Captured formal and candid photography for graduation events and high-profile media tasks. - Operated drones for aerial cinematography and performed post-production editing for promotional videos.	Oct 2023 - Dec 2023
National Research and Innovation Agency (BRIN), Bootcamp - Deployed AMCS for real-time autonomous greenhouse monitoring and environmental tracking. - Engineered IoT panel replicas to simulate and validate AMCS sensor arrays and control logic. - Developed AI predictive models for solar power and weather analysis to optimize energy distribution. - Integrated Computer Vision for automated plant disease detection and real-time dashboard alerting.	Feb 2026 - May 2026

ORGANIZATION EXPERIENCE

President University Robotic and Technology Club (PURTC) Chairperson Served as Chairperson of PURTC, overseeing organizational operations, managing divisions, and coordinating teams. Developed and executed work plans, led weekly training sessions, and drove strategic decision-making to ensure the organization ran effectively and met its goals.	Aug 2024 - Present
Keluarga Mahasiswa Buddhis Ashokavardhana (KMBA) Project Lead & Multimedia Specialist Led the committee for Praktik Penghayatan Dhamma, a KMBA retreat event, overseeing coordination and ensuring the team stayed aligned from preparation to execution. On the multimedia side, handling visual content creation, design, documentation, and fulfilling multimedia needs across organizational events.	Oct 2024 - Present

PROJECTS

Smart Waste Management System | IoT Jun 2025 – Jul 2025

- Developed a smart trash bin with GPS, dual ultrasonic sensors, servo-controlled lid, and LCD display for automated real-time waste level monitoring and location reporting.
- Built a multi-terrain robot using ESP32, L298N motor driver, 6DOF robotic arm, and 5-channel line follower for autonomous waste pickup and remote inspection.
- Deployed a custom web interface with GoPro live streaming and relay-controlled lighting for real-time robot control and environment monitoring via dual temperature & humidity sensors.

SCIO | Front End Jan 2025 – May 2025

- Developed SCIO, an AI-powered IT helpdesk chatbot using RAG technology and Llama 3 to answer support questions from private company knowledge bases.
- Designed and built the frontend interface in Next.js with real-time chat interactions and responsive message handling.

Autonomous Monitoring & Control System (AMCS) | IoT & AI Feb 2026 - May 2026

- Engineered an IoT smart panel for precision greenhouse management, tracking plant nutrition and environmental metrics in real time.
- Integrated Computer Vision to actively monitor crop health and detect early-stage plant diseases, triggering automated alerts to minimize loss.

Smart Factory Automation System | IoT & Computer Vision Mar 2026 - Apr 2026

- Built an automated factory prototype combining integrated IoT hardware with AI-driven Computer Vision for continuous industrial monitoring.
- Implemented real-time visual analysis for automated, type-specific production counting, establishing a scalable foundation for future anomaly detection and workflow optimization.

ADDITIONAL INFORMATION

- **Technical Skills:** Artificial Intelligence, Web & Software Development, Hardware & IoT, Multimedia & Design.
- **Languages:** English, Indonesia.
- **Certifications:** Kihajar STEM (Kemendikbud), Competency Assessment (BNSP), World Invention Competition and Exhibition (WICE) - Silver Medal, TOEFL ITP
